INDEX TO VOLUME 36

SUBJECT INDEX

*Starred items are "Shorter Notes"

A. Algebra and Number Theory

05. Combinatorics

Hartfiel, D. J. and Spellmann, J. W. *A role for double stochastic matrices in graph theory*, 389.

Kainen, Paul C. *On the stable crossing number of cubes*, 55.

Kallaher, Michael J. *Rank three affine planes*, 79.

Longyear, Judith Q. *Certain m.o.l.s. as groups*, 379.

06. Order, Lattices, Ordered Algebraic Structures

Baclawski, Kenneth. *Automorphisms and derivations of incidence algebras*, 351.

Berman, Joel. *On the congruence lattices of unary algebras*, 34.

Grätzer, G., Koh, K. M. and Makkai, M. *On the lattice of subalgebras of a Boolean algebra*, 87.

Johnson, E. W. and Lediaev, J. P. *Join-principal elements in Noether lattices*, 73.

Morash, Ronald P. *Orthomodularity and the direct sum of division subrings of the quaternions*, 63.

08. General Mathematical Systems

Berman, Joel. *On the congruence lattices of unary algebras*, 34.

10. Number Theory

Braun, P. B. and Zulauf, A. *A problem connected with the zeros of Riemann's zeta function*, 18.

Hindman, Neil. *The existence of certain ultrafilters on N and a conjecture of Graham and Rothschild*, 341.

Leitzel, James R. C. *Class number in constant extensions of function fields*, 47.

Osgood, Charles F. *The diophantine approximation of certain continued fractions*, 1.

Wagstaff, Samuel S., Jr. *Sequences not containing an infinite arithmetic progression*, 395.

12. Algebraic Number Theory, Field Theory and Polynomials

Adams, Helen E. *The completion of a ring with a valuation*, 21.

Leonard, Philip A. and Williams, Kenneth S. *Quartics over* GF(2^n), 347.

13. Commutative Rings and Algebras

Adams, Helen E. *The completion of a ring with a valuation*, 21.

Barger, S. Floyd. *A theory of grade for commutative rings*, 365.

Brown, William C. *A splitting theorem for algebras over commutative von Neumann regular rings*, 369.

Foxby, Hans-Bjørn. *Embedding of modules over Gorenstein rings*, 336.

Hill, Paul. *On the complete integral closure of a domain*, 26.

Hornell, James, *Intersection theory in an equicharacteristic regular local ring and the relative intersection theory*, 8.

Johnson, E. W. and Lediaev, J. P. *Join-principal elements in Noether lattices*, 73.

Sally, Judith. *A note on integral closure*, 93.

14. Algebraic Geometry
Hornell, James, *Intersection theory in an equicharacteristic regular local ring and the relative intersection theory*, 8.
Sally, Judith. *A note on integral closure*, 93.
15. Linear and Multilinear Algebra; Matrix Theory (finite and infinite)
Berman, Abraham. *Consistency of linear inequalities over sets*, 13.
Markham, Thomas L. *Nonnegative matrices whose inverses are M-matrices*, 326.
16. Associative Rings and Algebras
Baclawski, Kenneth. *Automorphisms and derivations of incidence algebras*, 351.
Brown, William C. *A splitting theorem for algebras over commutative von Neumann regular rings*, 369.
Fieldhouse, David J. *Regular pure projective modules*, 69.
Formanek, Edward and Snider, Robert L. *Primitive group rings*, 357.
Gordon, Robert. *Classical quotient rings of PWD's*, 39.
Liebert, Wolfgang. *Endomorphism rings of reduced complete torsion-free modules over complete discrete valuation rings*, 375.
Raphael, R. *Some homological results on certain finite ring extensions*, 331.
17. Nonassociative Rings and Algebras
Tsai, Chester. *An internal characterization of the prime radical of a Jordan algebra*, 361.
20. Group Theory and Generalizations
Backhouse, N. B. and Bradley, C. J. *Projective representations of abelian groups*, 260.
Dickinson, Robert P., Jr. *Noncancellative congruences on N-semigroups*, 317.
Formanek, Edward and Snider, Robert L. *Primitive group rings*, 357.
Johnson, C. S., Jr. and McMorris, F. R. *Completely cyclic injective semilattices*, 385.
McCool, James and Pietrowski, Alfred. *On recognising certain one relation presentations*, 31.
Sacerdote, George S. *Some undecidable problems in group theory*, 231.

B. Analysis

26. Real Functions
Chidambaraswamy, J. *On the mean modulus of trigonometric polynomials and a conjecture of S. Chowla*, 195.
Hedberg, Lars Inge. *On certain convolution inequalities*, 505.
Helton, Jon C. *Existence theorems for sum and product integrals*, 407.
28. Measure and Integration
Graham, Colin C. *Compact independent sets and Haar measure*, 578.
Levin, Mark and Stiles, Wilbur. *On the regularity of measures on locally compact spaces*, 201.
Sigmund, Karl. *On mixing measures for Axiom A diffeomorphisms*, 497.
*Stromberg, Karl. *An elementary proof of Steinhaus's theorem*, 308.
Sundaresan, K. and Day, Peter W. *Regularity of group valued Baire and Borel measures*, 609.
30. Functions of a Complex Variable
Goldstein, M. and Walsh, J. L. *Approximation by rational functions on Riemann surfaces*, 464.
Siegel, Alan. *On the Müntz-Szász theorem for C*[0, 1], 161.
Silverman, H. *On a class of close-to-convex functions*, 477.
Thomas, D. K. *On the coefficients of functions with bounded boundary rotation*, 123.

31. Potential Theory
Kuran, Ü. *On measures associated to superharmonic functions*, 179.
Taylor, Peter D. *Selection of representing measures for inner parts*, 537.
34. Ordinary Differential Equations
Bhagat, Bikan. *An equiconvergence theorem for a pair of second order differential equations*, 144.
Burton, T. A. *A differential equation of Lurie type*, 491.
Crandall, Michael G. *A generalization of Peano's existence theorem and flow invariance*, 151.
Fitzgibbon, W. E. *Time dependent nonlinear Cauchy problems in Banach spaces*, 525.
Grimm, L. J. *Analytic solutions of a neutral differential equation near a singular point*, 187.
Moeller, J. W. *Toeplitz operators and differential equations on a half-line*, 531.
St. Mary, Donald F. *On oscillation of complex linear differential systems*, 191.
Schmitt, Klaus. *Periodic solutions of small period of systems of nth order differential equations*, 459.
35. Partial Differential Equations
Young, Eutiquio C. *Uniqueness of solutions of the Dirichlet problem for singular ultrahyperbolic equations*, 130.
40. Sequences, Series, Summability
Mah, Peter F. *Matrix summability in amenable semigroups*, 414.
Moh, T. T. *On a general Tauberian theorem*, 167.
Schaefer, Paul. *Infinite matrices and invariant means*, 104.
41. Approximations and Expansions
Poreda, S. J. *On the continuity of best polynomial approximations*, 471.
Siegel, Alan. *On the Müntz-Szász theorem for C[0, 1]*, 161.
42. Fourier Analysis
Chidambaraswamy, J. *On the mean modulus of trigonometric polynomials and a conjecture of S. Chowla*, 195.
*Ebenstein, Samuel E. *$\Lambda(p)$ sets and Sidon sets*, 619.
Fefferman, Charles and Shapiro, Harold S. *A planar face on the unit sphere of the multiplier space M_p, $1<p<\infty$*, 435.
Kaufman, Robert. *Kronecker sets and metric properties of M_0-sets*, 519.
Redheffer, Ray. *Two consequences of the Beurling-Malliavin theory*, 116.
Young, Wo-Sang. *A note on maximal inequalities*, 207.
43. Abstract Harmonic Analysis
*Argabright, L. N. *On the mean value of a weakly almost periodic function*, 315.
Cambern, Michael. *The isometries of $H^\infty(K)$*, 173.
Graham, Colin C. *Compact independent sets and Haar measure*, 578.
46. Functional Analysis
Aron, Richard and Cima, Joseph A. *A theorem on holomorphic mappings into Banach spaces with basis*, 289.
Banilower, H. *Simultaneous extensions from discrete subspaces*, 451.
Basener, Richard F. *A condition for analytic structure*, 156.
Cambern, Michael. *The isometries of $H^\infty(K)$*, 173.
Casazza, P. *On a geometric condition related to boundedly complete bases and normal structure in Banach spaces*, 443.
Clark, James R. *Coreflexive and somewhat reflexive Banach spaces*, 421.
Crofts, G. *Generating classes of perfect Banach sequence spaces*, 137.
Digernes, Trond. *A new characterization of separable GCR-algebras*, 448.

Giellis, George R. *A characterization of Hilbert modules*, 440.
Holub, J. R. *Compactness in topological tensor products and operator spaces*, 398.
Lindberg, Karl. *Contractive projections in continuous function spaces*, 97.
Muhly, Paul S. *Maximal weak-* Dirichlet algebras*, 515.
Schröder, Gunnar. *Differentiation of interval functions*, 485.
Smith, James F. *The p-classes of a Hilbert module*, 428.
*Wilansky, Albert. *Projections of Banach spaces*, 306.
Young, Wo-Sang. *A note on maximal inequalities*, 207.

47. Operator Theory
Gatica, Juan A. and Kirk, W. A. *Fixed-point theorems for lipschitzian pseudo-contractive mappings*, 111.
Holub, J. R. *Compactness in topological tensor products and operator spaces*, 398.
Lebow, Arnold. *Spectral radius of an absolutely continuous operator*, 511.
Lindberg, Karl. *Contractive projections in continuous function spaces*, 97.
Luecke, Glenn R. *A new proof of a theorem on quasitriangular operators*, 535.
*Pedersen, Gert K. *Some operator monotone functions*, 309.
*Pedersen, Gert K. and Takesaki, Masamichi. *The operator equation THT=K*, 311.
Sato, Ryotaro. *On the individual ergodic theorem for positive operators*, 456.
*Venkateswaran, S. *The existence of a solution of $f(x)=kx$ for a continuous not necessarily linear operator*, 313.
*Wilansky, Albert. *Projections of Banach spaces*, 306.

49. Calculus of Variations and Optimal Control
Erbacher, Joseph A. *A variational problem for submanifolds of Euclidean space*, 467.

C. Applied Mathematics

90. Economics, Operations Research, Programming, Games
Orkin, Michael. *An approximation theorem for infinite games*, 212.

D. Geometry

50. Geometry
Kallaher, Michael J. *Rank three affine planes*, 79.

52. Convex Sets and Geometric Inequalities
Berman, Abraham. *Consistency of linear inequalities over sets*, 13.
Lay, Steven R. *Separation by cylindrical surfaces*, 224.
Stavrakas, Nick M. and Jamison, R. E. *Valentine's extensions of Tietze's theorem on convex sets*, 229.
Stein, Sherman K. *A symmetric star body that tiles but not as a lattice*, 543.
Taylor, Peter D. *Selection of representing measures for inner parts*, 537.

53. Differential Geometry
Erbacher, Joseph A. *A variational problem for submanifolds of Euclidean space*, 467.
Spruck, Joel. *An a priori estimate for the Gauss curvature of nonparametric surfaces of constant mean curvature*, 217.

E. Logic and Foundations

02. Logic and Foundations
Barback, Joseph. *Universal regressive isols*, 549.
Ellentuck, Erik. *Nonrecursive relations among the isols*, 239.
Sacerdote, Georege S. *Some undecidable problems in group theory*, 231.

F. Statistics and Probability

60. Probability Theory and Stochastic Processes

Rosencrans, Steven and Sawyer, Stanley. *An extremal property of independent random variables*, 552.

Samal, G. and Mishra, M. N. *On the lower bound of the number of real roots of a random algebraic equation with infinite variance. II*, 557.

G. Topology

22. Topological Groups, Lie Groups

*Argabright, L. N. *On the mean value of a weakly almost periodic function*, 315.

Armacost, D. L. and Armacost, W. L. *On Q-dense and densely divisible LCA groups*, 301.

Backhouse, N. B. and Bradley, C. J. *Projective representations of abelian groups*, 260.

Graham, Colin C. *Compact independent sets and Haar measure*, 578.

Schochetman, I. *Kernels of representations and group extensions*, 564.

Sundaresan, K. and Day, Peter W. *Regularity of group valued Baire and Borel measures*, 609.

54. General Topology

Banilower, H. *Simultaneous extensions from discrete subspaces*, 451.

Franklin, S. P. and Walker, R. C. *Normality of powers implies compactness*, 295.

Fuller, R. V. *Condition for a function space to be locally compact*, 615.

Hass, Dennis C. *The ends of product manifolds*, 267.

Keynes, Harvey B. *Disjointness in transformation groups*, 253.

Klassen, Vyron M. *Complexes with the disappearing closed set property*, 583.

Noble, N. *Two examples on preimages of metric spaces*, 586.

Reed, G. M. *Concerning completable Moore spaces*, 591.

Thornton, Melvin C. *Characterizing topologies by functions*, 613.

*Waterhouse, William C. *An empty inverse limit*, 618.

Weller, Glenn P. *The intersection multiplicity of compact n-dimensional metric spaces*, 293.

West, James E. *The subcontinua of a dendron form a Hilbert cube factor*, 603.

55. Algebraic Topology

Gottlieb, Daniel Henry. *Homology tangent bundles and universal bundles*, 246.

Handel, David. *The diagonal fibration, H-spaces, and duality*, 275.

Lee, Ming-Jung. *Homotopy for functors*, 571.

Weller, Glenn P. *The intersection multiplicity of compact n-dimensional metric spaces*, 293.

57. Manifolds and Cell Complexes

Anderson, E. H. *Self-universal crumpled cubes and a dogbone space*, 280.

Bryant, J. L. *An example of a wild* $(n-1)$ *sphere in* S^n *in which each 2-complex is tame*, 283.

Gottlieb, Daniel Henry. *Homology tangent bundles and universal bundles*, 246.

Hass, Dennis C. *The ends of product manifolds*, 267.

Klassen, Vyron M. *Complexes with the disappearing closed set property*, 583.

Samelson, Hans. *Note on vector fields in manifolds*, 272.

Schultz, Reinhard. *Circle actions on homotopy spheres bounding plumbing manifolds*, 297.

Weller, Glenn P. *The intersection multiplicity of compact n-dimensional metric spaces*, 293.

West, James E. *The subcontinua of a dendron form a Hilbert cube factor*, 603.

58. Global Analysis, Analysis on Manifolds

Aron, Richard and Cima, Joseph A. *A theorem on holomorphic mappings into Banach spaces with basis*, 289.

Block, Louis and Franke, John. *A classification of the structurally stable contracting endomorphisms of S^1*, 597.

Sigmund, Karl. *On mixing measures for Axiom A diffeomorphisms*, 497.
